Secure, simple data sharing
for schools and EdTech providers

Operate with total confidence knowing the data you share with apps is managed efficiently and securely

Schools deserve a quality data management solution that is maintained in a powerful, highly secure, and easy-to-use way. That's why we've built the Wonde portal, an innovative platform for schools.

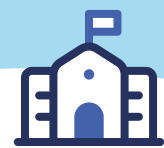

Quick

Easy

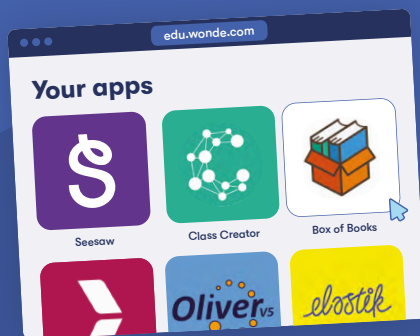

Secure

Prioritise teaching

How it works

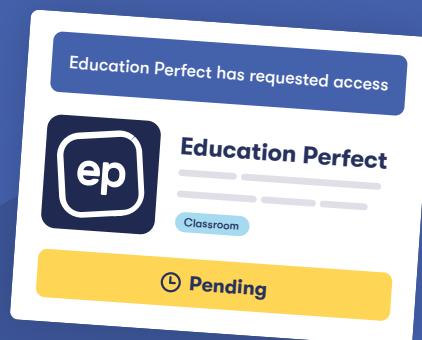

Our innovative cloud-based solution enables you to take full control of how your school data is used by third-party apps.

STEP 1

App requests to connect

An app requests permission from the school to sync specific fields to automatically populate their product.

STEP 2

School is notified of app request

Wonde notifies the school of the app's request to access data. The school logs into their portal and sees the app as a 'Pending request'.

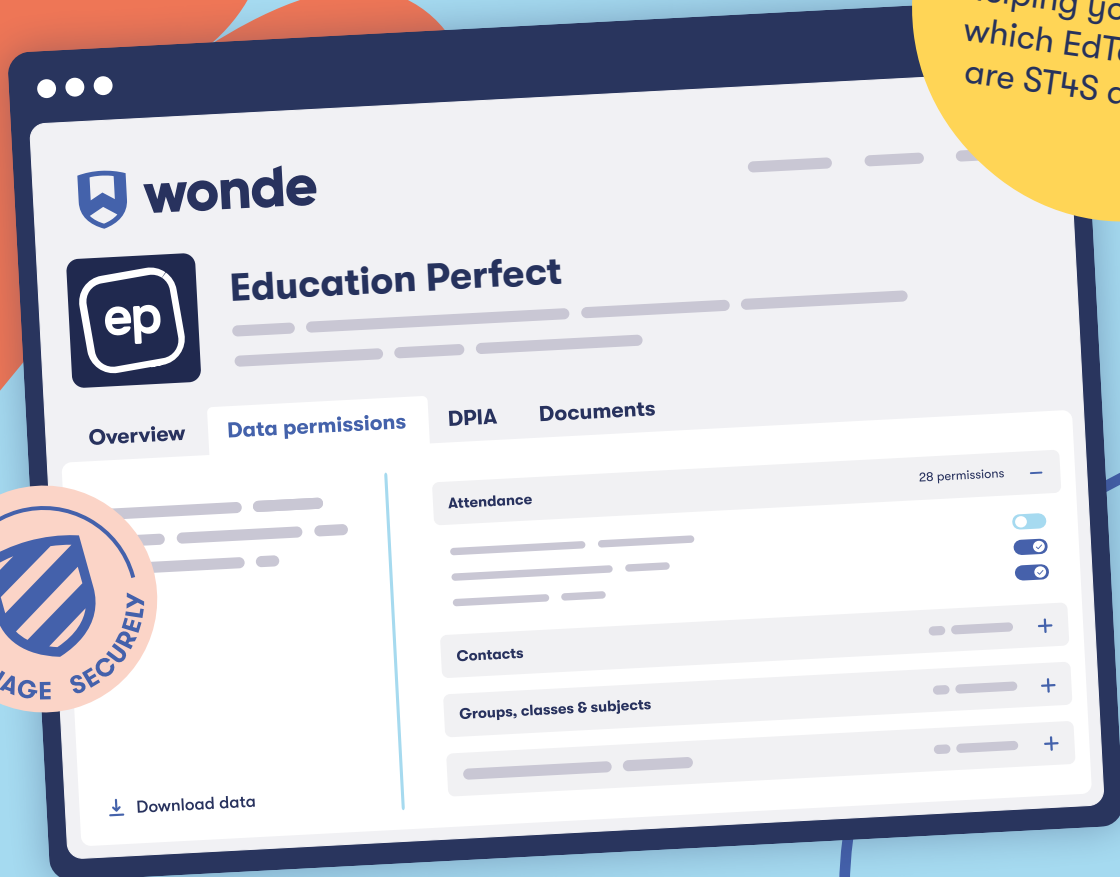

STEP 3

School controls the request via Wonde

Through the portal, the school can review the data access request and can approve or decline the data fields.

Helping you identify which EdTech apps are ST4S assessed

STEP 4

Integration is complete

Once data access is approved, data flows from the School Information System to the app safely and securely, and the school is ready to access and enjoy their new app.

STEP 5

App receives data updates automatically

Any updates made on the School Information System are reflected in the app without having to do anything.

STEP 6

School always controls the data they share

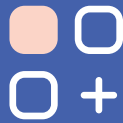

Through the Platform, the school can continually review the data permissions for the app and revoke or change access as needed.

A simplified, efficient system designed for ease-of-use

Automated, accurate data sharing

Once data access requests are approved by the school, data flows securely from the School Information System to the app. Schools no longer need to manually select and send data to each of their apps during initial setup and ongoing updates, saving significant staff time and eliminating the risk of human error.

Simple yet powerful

An intuitive solution that is easy to understand and manage.

Easy to integrate

Enjoy fully flexible accommodation of any app.

Total control and visibility over data access permissions

Data minimisation and authorisation

Apps only request access to the data fields they need, and schools can review, approve or deny data access permissions at any time.

Adaptable and flexible system

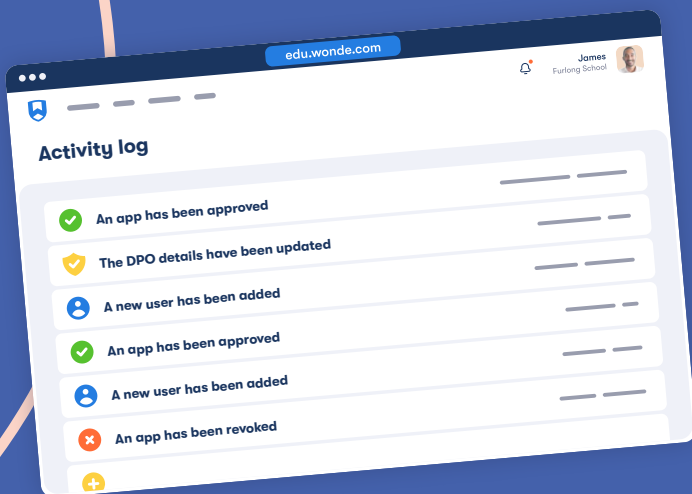

Schools can manage how data is shared with apps down to an individual or group level.

Accountability and oversight

Instant access logs and monthly summaries* allow schools to keep track of who sets or changes data access permissions and how.
